| Full intellectual property rights, unrestricted deployment. | <ul style="list-style-type: none"> ▪ No additional licensing fees to be paid - unlimited deployment rights within the organization. |
| Fixed-price bid model. | <ul style="list-style-type: none"> ▪ No hidden development costs |

A credit information bureau jointly started by Association of Finance Companies in Malaysia (AFCM) and Association of Hire-Purchase Companies of Malaysia (AHPCM) to provide commercial, credit, financial and other relevant information pertaining to the business to the subscribers upon enquiry.

Customer Requirement:

- Web-based vehicle and equipment registration system
- It build a new interface gateway between the client and JPJ to handle registration of new vehicles and transfer of ownership claims. All auto dealers/motor vehicle financing companies in Malaysia have to subscribe for this service.

Business Problem

- The main objective of the system are:
- To avoid multiple financing deals;
- To highlight problem vehicles or equipment; and
- To provide basic credit information on borrowers, guarantors of subscribers information on bankruptcy list or the reference list for credit evaluation, monitoring and recovery.
- The vehicle and equipment registration system is an intranet-based application.

Solution

- A web based delivery channel by extending a 15 year old host based application (IBM AS400/DB2)
- Development environment: J2EE environment with Websphere, DB2.

Results and Key Benefits

- The application is working since 2002 and it's a real time enquiry system providing information on vehicles, creditors and guarantors.

Designing technology solutions
beyond boundaries

- The members will directly input the registration details, discharge information for JPJ to process the transactions and the members will be notified by email on the status of their transactions.
- The data transfer between the client and JPJ is thro' FTP at fixed intervals everyday and the data is encrypted/decrypted using PKI. Further, a log is maintained to track all data transfers.
