Fixed-price bid model.	<ul style="list-style-type: none"> ▪ No hidden development costs

One of the country's largest life insurers, with a network of 23 branches nationwide servicing more than 1.4 million policy holders.

Customer Requirement:

Voucher Entry System

Business Problem

The client has its own mainframe hosted in KL. However, capturing of voucher information by all the branches was manual and the vouchers had to be sent to KL for capture/processing

Solution

- The application provides the users at all the clients branches to capture voucher information at source and transfer the same to the headquarters at predefined intervals in a day. The application allows to capture different voucher type information as well as handle individual, bulk and specific voucher entries. The application also has direct interface to the mainframe for data uploading and undertake validations accordingly.
- Development environment: Client/server model, with Microsoft Visual Basic as the development tool and MS SQLServer as the database on Win 2000

Results and Key Benefits

- This saved the client considerable amount of time in data entry and reconciliation of Accounts.
